Optimus Frontend Developer Assignment

The goal of this task should be completing a simple Weather app by following these rules:

1. Implementing a simple React App
2. Documenting your code: how to run your app etc.
3. Uploading your code to Github.

- The end product should look like: https://weather-app-9fae0.firebaseapp.com/
- The API for the weather:
  ``` https://query.yahooapis.com/v1/public/yql?q=select * from weather.forecast where woeid in (select woeid from geo.places(1) where text='${cityname}') and u='c'&format=json ```

  Note: All you need to do is fill in the **city name** part and they will get the weather details accordingly

Deadline: Friday 23rd of November.
